Melt Pressure Transmitter

Model: PT124B-125 (Explosion proof)

Description

PT124B-125 Series Melt Pressure Transmitter adopts intrinsic safety explosive proof and welded construction and has wide application in melt pressure measuring in the dangerous occasion of easy-to-combustion and easy-to-explosion This model has the character of explosion proof, abrasion resistance, low thermal draft, high accuracy, excellent anti-jamming capability, etc. It is suitable for pressure measuring and controlling in melt liquid medium for Rubber and Plastic machinery, chemical fiber, steam, petro Chemical Machinery and so on.

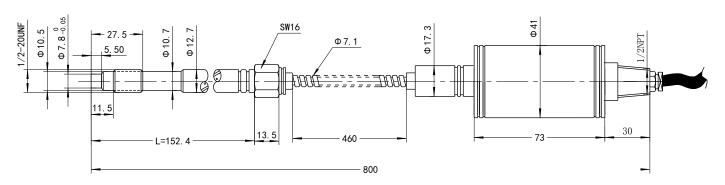

Application

- ◆ Chemical fiber equipment
- Plastic and rubber manufacturing equipment
- ◆ Vapor, petro chemical Industry
- ◆ Other pressure measure and control

Feature

- High-standard quality
- ◆ Stainless steel Seal
- ◆ Simple Installation
- ◆ 80% inner calibration
- ◆ Excellent stability and repetition

Dimension

Wiring code

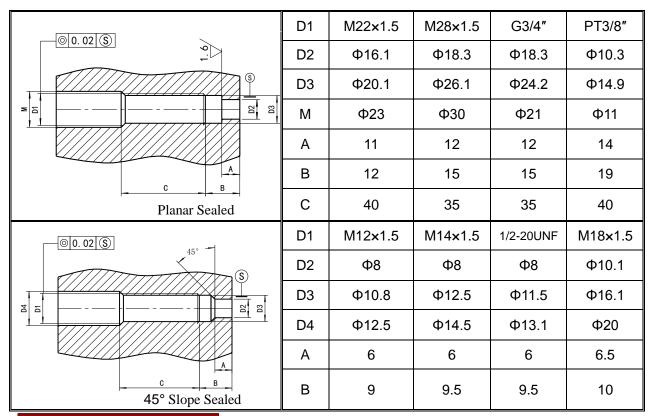

Output	4/20mA (2 wires)		2mV/V, 3.33mV/V, 0-10V		
Wiring	E+	Red	E+	Red	
	S+	Blue	S+	Blue	
	CAL	Yellow	S-	White	
	CAL	Black	E -	Yellow	
	/	/	CAL	Black	

ZHYQ Sensor & Control Page 1 of 2

Specification					
Range:	010MPa to 0150MPa (01500psi to 020000psi)				
Output:	0~5V; 0~10V; 4-20mA				
Accuracy:	±0.5%FS				
Input voltage;	24VDC				
Repeatability:	±0.2%				
Construction:	Wheatstone bridge				
Bridge resistance:	350 ohms±10%				
Overload Pressure:	1.5xFSO				
Internal calibration:	80%±1%				
Insulation Resistance:	1000Megohms @50Vdc				
Max Diaphragm Temp:	0~350℃				
Electric connector:	1/2NPT conduit with leads				
Process connector:	1/2"-20UNF, M14×1.5, M18×1.5 (customer design)				

Mounting Hole

Ordering Guide

Model	Range(bar)	Output	Screw	Electric	Other requirement			
			Thread	connection				
PT124B-125								
Example: PT124B-125-500Bar-4/20mA-1/2-20UNF-1/2NPT conduit

Melt pressure transmitter

Operating instruction

Attention for installation

1, Installation

Do not remove protective cap until ready to install. Prior to initial installation, verify correct machining of mounting hole. Install with aluminum gasket. The electronics housing should be secured, with the enclosed mounting bracket.

2. Remove

Make sure that there is no remained metal or plastic; remove all of the transducers from the equipment before you clean the extruder. You can remove the transducer only when the polymer is molten. And clean the diaphragm of the transducer with soft cloth as soon as you remove it. At the same time, you can use ZHYQ's cleaning tool kit to clean the remained material in the mounting hole in order to install easily next time.

3, Start-up

Bring system to operating temperature, and with no pressure, follow recommended procedures with instrumentation for zero and span adjustment. Make sure that there is sufficient "soak time" to assure that any material at the tip of the transducer is molten before process is started.

4, Electrical house

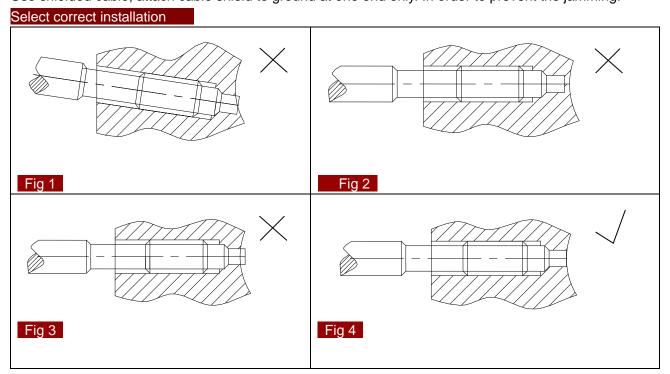

The tip of the transducer can endure high temperature, but the shell (electrical house) only endure temperature lower than 80°C, so it should place in the room temperature. It can benefit for the accuracy and natural life of the transducer if you keep the shell from the high temperature.

5, Overload effect

During the course of pressure measuring and controlling, it is better to make sure the transducer within the rated pressure, too long time overload the pressure will affect the accuracy and natural life of transducer, although the transducer own determinate overload ability.

6, Wiring

Use shielded cable, attach cable shield to ground at one end only. In order to prevent the jamming.
